## The Jaguar Voice Modem

The Jaguar Voice Modem

*Introduction*

*Modem Interface*

*Data Communications & Bandwidth*

*Control Flow*

*Call*

*Hang Up*

*Answer Sequence*

*Parsing The Received Data*

*Call Waiting*

# *Jaguar Developer Documentation Table of Contents*

Comment Reference For Voice Plus Data

*Initiate-Report Software Reset*

*Change Host Baud Rate to 19200*

*Set Data Packet Size*

*Dial Number / Transmit DTMF Tone*

*Poll DTMF Detector*

*Report Handshake Status*

*Set Voice Volume*

*Set Voice Sampling Frequency*

*Send Real Time Data*

*Report Dial Tone Detector*

Unsolicited Reponse Reference

*Receive Real Time Data*

*Packet Error Status*

*Call Waiting Detected*

*Line Lost*

## Jaguar Workshop Series

#1 - Minimum Object List Update

#2 - Moving A Bitmap With The Object Processor

#3 - Clipping A Bitmap Object With The Object Processor

#4 - Scaling A Bitmap Object With The Object Processor

#6 - GPU Interrupt Object Processing

#12 - Rotating A Bitmap With The Blitter

## Sample Programs

Jaguar Mandlebrot/Fractal Demo

JagLine, JagSlant, JagBlock, JagSkew, JagShade

Joypad Reading Example

Analog Joystick Example

EEPROM Example

RGB True Color Bitmap Display Example

Simple DSP Waveform Output

Blitter Demo

## Tools

**(The main documentation for some tools is provided in separate sections)**

Madmac Macro Assembler

*Commandline Options*

*Summary of New Assembly Directives*

*Notes On Assembly Directives*

*Miscellaneous Notes*

ALN Linker

*Commandline Options*

DB (WDB/RGBJAG) Debugger

*Commandline Options*

*Debugger Messages*

GASM & LTXCONV

Utilities

*AR68 Archive Utility*

The AR68 program creates object module archive library files that can be used with the ALN linker.

*DUMP Utility*

*SIZE Utility*

The SIZE utility analyzes an executable program file or object module file and prints information about the sizes and load addresses of the various program segments, and optionally a list of the symbols defined within the file.

*FILEFIX Utility*

Breaks down an executable program file into separate files for the TEXT, DATA, and symbol table segments, and outputs a script file to load them into the Alpine Board.

*STRIP Utility*

Removes symbols from an executable program file

*FGREP Utility*

Fast General Regular Expression Parser. This program will search text files for a specified string pattern and tell you which files match or not.

*LS Utility*

This is a UNIX-style list-files utility which has some options the standard 'DIR' command does not.

*MAKE Utility*

This is a utility used to build your program files from your source code files by compiling only those files which have been changed since they were previously compiled.

*GULAM Shell*

The GULAM shell is a UNIX C-Shell clone for the Atari computer, which normally has no standard commandline shell.

*3DS2JAG Utility*

The 3DS2JAG Utility converts AutoCAD 3D Studio objects into a format that can be used with the 3D Graphics libraries. (See the **Libraries** chapter.)

*PARSE Utility*

The PARSE utility converts standard MIDI files to work with the Jaguar Music Driver. (See the **Libraries** chapter.)

*SNDCOMP Utility*

The SNDCOMP utility compresses digital sound samples. (See the **Libraries** chapter.)
